

AGERA® anti-ageing skin care has been clinically proven to penetrate and stimulate the skin for rapid, visible results. Powerful antioxidants protect against free radical damage, while retinols of varying strengths smooth away fine lines and wrinkles. Growth Factor Peptides, available in AGERA®, help to control the skin's internal ageing process while restoring and maintaining its thickness and resilience. AGERA® skin care is formulated using tiny particles called bioemulsions that encapsulate these powerful anti-ageing ingredients and aid their penetration into the skin.

THE SKIN CARE OF THE FUTURE

ESSENTIAL AGE MANAGEMENT PRODUCTS

Intensive MagC® Gel	Vitamin C antioxidant to combat free radical damage and promote a smoother softer skin
Intensive Peptide Serum	Growth Factor Peptides to restore and strengthen the skin
Evening Peptide Complex	Retinol, Vitamin C and growth factor peptides to smooth and strengthen the skin

THE MOST ADVANCED SKIN CARE IN THE WORLD

developed in the US, is clinically proven. Experience the beauty of science with the most effective skin care range in the world.

MAKING A MAJOR DIFFERENCE

Retinol

Retinol has been clinically proven to reverse many signs of skin ageing such as fine lines, wrinkles and uneven skin tone. AGERA® delivers this powerful anti-ageing ingredient in tiny particles that penetrate the skin as time-released capsules to ensure rapid results with minimal irritation.

Bioemulsion Technology and Skin Care

AGERA® is the first skin care range in the world to use tiny bioemulsion particles to encapsulate its powerful anti-ageing ingredients (see diagrams). These minute particles penetrate the skin's outer layer to ensure minimum irritation and maximum results.

Advanced Solutions for Pigmentation

AGERA® has formulated pigmentation control treatments to help reduce unwanted pigmentation and improve the clarity and colour of the skin.

AGERA® Skin Peels

The revolutionary proliferative peels created by AGERA® are non-irritating, pain free and cause no down time from skin shedding, redness or irritation. After only one session, the skin will look clearer, smoother and brighter. For maximum results a course of AGERA® skin peels can be combined with microdermabrasion.

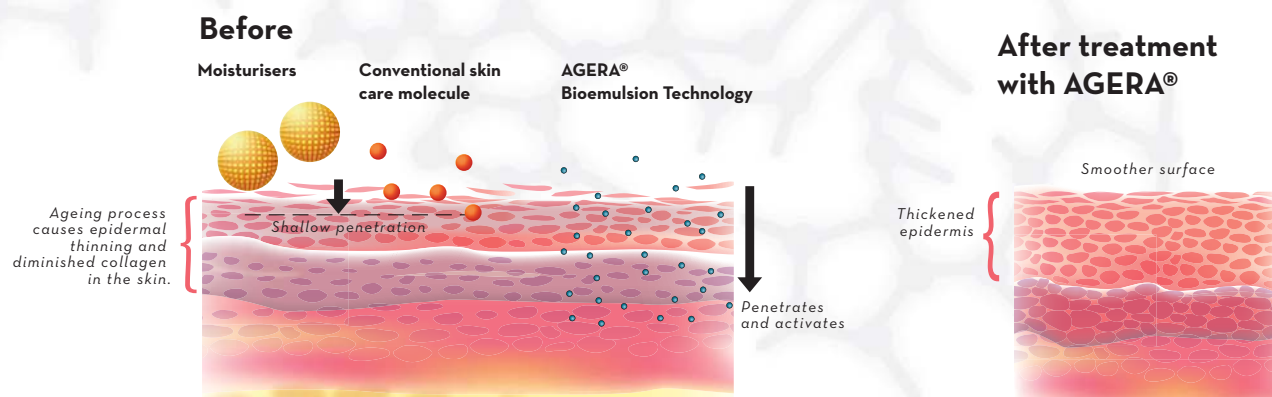

SKIN GETS A WAKEUP CALL

Growth Factor Peptides

Growth factor levels decline as we age, causing the skin to thin and lose its elasticity. The powerful Growth Factor Peptides found in AGERA® anti-ageing products stimulate the skin to produce new collagen and elastin for a firmer, smoother and more radiant appearance.

Antioxidants

Free radicals are damaging agents that disrupt the normal function of skin cells. They are caused by sun exposure, pollution and other environmental factors. AGERA® contains a range of powerful antioxidants proven to combat free radical damage and restore a smoother, softer texture to the skin.
